See a real saving on your electricity bill and get paid for every unit of electricity you generate

(8% ROI, index linked)

The Feed-in Tariff

In April 2010 the government announced the Feed In Tariff (FIT) for Solar Photovoltaic (PV) to assist you, the home owner, to produce and use free electricity, which will make a significant saving on your electricity bills.

For a solar PV system that you have installed, for every unit of electricity you generate whether you use it or not you will be paid 41.3p Tax free (lower rates above 4Kw installed systems). This is an attractive return on investment of about 8%-10%. This amount is index linked and guaranteed to last for 25 years.

However, in April 2012 for new installations, the agreed FIT will drop quite significantly, therefore now is the time to act in order to receive the highest rate FIT for the 25 year period.

Any electricity the system produces which is not used by you can be exported to the grid where you will receive extra payment.

To be eligible to receive these payments both the products and installer must be Microgeneration Certification Scheme (MCS) accredited, which **SolarUK** and our products are.

Who is SolarUK?

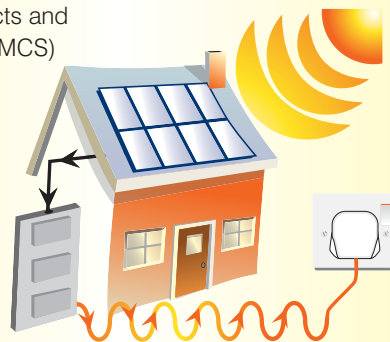

SolarUK is Britain's leading Solar Research and Development manufacturer and installer.

Our factory in Sussex produces Europe's leading high efficiency Solar Thermal Collectors, solar controls and plumbing systems.

As an accredited MCS installer and Solar Trade Association member we will use our knowledge and experience to supply you with the best system for your house, without any high pressure sales. We install domestic and commercial systems and have been chosen by many house builders to design and install systems for their large building programs.

- **SolarUK** has been installing solar systems for over 10 years, and now with the introduction of the new Feed In Tariff (FIT) being offered by the Government we have seen a sharp rise in installations.
- For every unit of electricity you generate whether you use it or not, you will be paid 41.3p tax free (up to 4Kw installed systems). This is an attractive return on investment of about 8%-10%.
- The FIT is index linked and guaranteed for 25 years.
- To benefit from the feed-in tariff your PV system must be installed by a company that is registered under the Microgeneration Certification System (MCS) such as **SolarUK**.

For more information on Feed-in Tariffs please go to: www.solaruk.com/fits

A Typical 4Kw System

FITs*	£1475
Units not required from utility supplier **	£393
Total yearly savings:	£1868

* FIT payment: 41.3p x 3572Kwh = £1475
 ** Units not required from electricity supplier (@ 11p/Kwh) = 11p x 3572Kwh = £393
 Yearly Carbon Dioxide savings: 1865Kg CO2
