

CASE STUDY

Oval Road Communal LaZer2 Solar Water Heating

Oval Road was a project of 27x LaZer2 solar trackers for a prestigious new Barratt Homes development of apartments in Camden, London.

Barratt's specified the Solar UK LaZer2 tracker because of its very high energy yield per m² of roof. They were unable to find any other product to enable them to comply with the 10% renewable energy requirement demanded by Camden Council.

LaZer2 solar thermal is THE decarbonising solution for hot water in the UK.

Solar UK have been delivering solar projects since 2000. We are, by most definitions, energy experts.
