

## CASE STUDY

### Leatherhead Police Federation: LaZer2 solar hot water system

The Police Federation building in Leatherhead was designed to incorporate solar panels to provide hot water and heating for the swimming pool.

Because of the limited roof space, the LaZer2 panels' very high output per m<sup>2</sup> allowed the building to meet the strict requirements imposed upon it by planning regulations. According to EN12975-1 the LaZer2 panel yields 893kw/m<sup>2</sup> per annum. Which is the highest documented, using the European tests.

Solar UK have been delivering solar projects since 2000. We are, by most definitions, energy experts.

For details of how we can help your project, contact the team directly -
